Use Google Chrome - Most Stable Browser

Matt Podschweit - 2019-10-22 - in [General](#)

Many users report technical functionality issues like screen locking, error messages or navigation buttons not appearing on screen. These issues are commonly related to the browser you are using. We have found Google Chrome running on either a Windows PC or Mac computer to be the most stable environment in which to run our coursework. We do not recommend accessing coursework on mobile devices. If you are experiencing technical difficulties, first try switching to Google Chrome.
